SiliconDust previews the HDHomeRun CONNECT DUO+ network DVR TV Tuner with 250Gb storage

With our latest out of the box tuner solution free OTA TV has never been easier to access. Users can now record directly to the built-in 250Gb storage of the CONNECT DUO+ using our preloaded DVR engine*.

Receive Free to air TV via an antenna allowing you to send glorious high definition content to anywhere in your home over your existing home WiFi, or a wired Ethernet connection from your home router. No more expensive Cable TV subscriptions or cable boxes rental fees. You can now easily watch great live and recorded Free TV – whether on Android TV device, phone, tablet, computer or smart TV around the whole home and with our built-in 250Gb internal storage capacity, it has never been easier to store and replay up to 60hrs of HD recordings. Storage is fully accessible from all supported devices across the network.

LIVE TV can be watched right out the box via the preloaded HDHomeRun DVR engine including pause and rewind and then it can be turned into a fully functional DVR with recording and scheduling of favorite shows when the HDHomeRun DVR subscription is activated. Live TV can also be watched and recorded with our Kodi/XBMC Add-On or programs can be recorded, paused, rewind and scheduled using popular compatible third party DVR software.

*Requires guide subscription

Flexible family use and plays nicely with the widest range of devices

The continued growth of cord cutting and shaving has created a need for TV delivery solutions that give the viewer maximum flexibility and cost savings. That is exactly what SiliconDust has produced in the HDHomeRun CONNECT DUO+. This new generation product builds on a successful previous generation and has a sleek new form factor as well as the ease of in-built storage. Over the past few years we have also been building the infrastructure capability to support the widest range of devices and platforms and boast an extensive lineup including support for Windows 10, Android tablets and phones (4.4.2), Android TV streaming boxes & devices (5.0), TV's with Android OS, Fire TV OS television, Apple OSX (10.11), iOS (v10) and screen mirroring to compatible Samsung and Apple devices. Device support includes Sony PS3 and PS4, Xbox One and Xbox One X and Nvidia Shield Pro to name just a few.

We pride ourselves on putting choice into consumers hands. All of our hardware products can be mixed and matched by adding a new device to increase the number of available tuners on the home network, this works across both our OTA and cable tuners, current and legacy models so you can create your ultimate TV experience on your terms.

So what is our DVR service?

SiliconDust have also been busy developing their DVR platform and App that transforms the CONNECT DUO+ into a fully functional DVR solution for whole home use and with its innovative Slice View™ interface we have re-imagined the DVR to make it an intuitive simple experience. With great features like schedule and record, pause and rewind live TV, program image posters and synopsis, pause on one device and resume on another and search by category, it's 'TV viewing on your terms'.

Cut the cable and save on monthly rental fees.
